PROFESSIONAL SUMMARY

AI & Machine Learning fresher skilled in Python, machine learning, and data analysis, with hands-on experience in NLP, speech processing, and predictive modeling. Seeking an entry-level AI/ML role to develop scalable, data-driven solutions.

PROFESSIONAL EXPERIENCE

AI Program Trainee Jul 2025 - Present

Samsung Innovation Campus

Pursuing industry-oriented training in Artificial Intelligence and emerging technologies, gaining hands-on experience in machine learning concepts, real-world problem solving, and guided AI projects while strengthening programming and analytical skills.

Design Intern Sep 2025 - Jan 2026

Galactic 3D PVT LTD

Designed and optimized 3D models using industry-standard tools, applying geometry and rendering principles to ensure accuracy, improve performance, and enhance design quality through collaborative feedback.

CORE SKILLS

• Machine Learning: Supervised & Unsupervised Learning, Classification, Regression, Model Evaluation

• Programming: Python, SQL,DSA

• AI & NLP: Resume Parsing, Keyword Extraction, Semantic Similarity, Speech Recognition

• Data Science: Data Preprocessing, Feature Engineering, EDA

• Libraries: Scikit-learn, Pandas, NumPy, Matplotlib • Frameworks & Tools: FastAPI, Git, REST APIs

• Other Skills: 3D Modeling, Visualization, System Optimization

PROJECTS

AI Resume Optimization System

Developed an AI-powered resume analysis platform to improve ATS compatibility and job-role matching using NLP techniques such as resume parsing, keyword extraction, and semantic similarity

scoring. Built scalable backend APIs with Python, FastAPI, and SQL to automate resume-job comparison and skill gap identification.

AI Digital Career Advisor Twin:
Built an AI-based career guidance system that recommends career paths using machine learning for role-fit prediction, skill gap analysis, and personalized roadmap generation, integrating resume parsing and recommendation modules using Python and SQL

Voice-Based Transport Enquiry System
Developed a speech-enabled transport enquiry system that converts voice input to text, identifies user intent using NLP, and retrieves relevant data from a database, improving accessibility and enabling hands-free interaction.

Voice-Based Stress Detection System
Designed a machine learning system to detect stress levels from speech by extracting acoustic features such as MFCC, pitch, and energy, and applying classification models for real-time emotional pattern analysis.

ACHIEVEMENTS

Successfully managed planning and execution of technical events, workshops, and competitions, demonstrating strong leadership and organizational abilities.

Anchored cultural and technical programs, enhancing public speaking and communication skills. Practiced yoga and mindfulness techniques, improving discipline and stress management.

CERTIFICATIONS

Intro to Machine Learning — Kaggle (2026)

Google Analytics Certification — Google (Valid till 2027)

Data science for engineers — IIT madras

Agile Project Management — HP LIFE (HP Foundation)

SQL and Relational Databases 101 — IBM Cognitive Class

Content Marketing Certification — HubSpot Academy (2026)

EDUCATION

Bachelor of Engineering in Artificial Intelligence and Machine Learning Jun 2027

Cambridge institute of technology

GPA: 8.64
